

*"Environmental solution for effectively removing paint"*

### **"ES4 - The Completely Environmentally Friendly Paint Remover without Environmental Labeling"**

This product information is only intended as a guide to the handling of the product. Therefore, the ES METHOD cannot provide any guarantee for the achieved results. The user of the product shall perform tests and be responsible for the outcome.

ES4 - The user-friendly and thick one-step product. ES4 is the ultimate solution for effectively removing old paint, toxic bottom paint, and coatings from both smooth and porous surfaces in building preservation. With its groundbreaking formula and versatile range of applications, ES4 is the perfect choice for industrial painted surfaces, including trains, buses, cars, sheet metal-clad buildings, and much more. Whether you need to strip a smooth surface or treat a porous one, ES4 will deliver impressive results every time. Does not attack gelcoat.

ES4 excels primarily on smooth industrial painted surfaces but can also be used on porous surfaces. This makes it a versatile solution for various types of surfaces, both indoors and outdoors. We are proud to inform you that ES4 is easily biodegradable according to OECD test 302 B, making it an environmentally friendly choice for your paint stripping needs. When it comes to removing thick one-step paint and the most toxic VC17 paint, ES4 outperforms competitors. It only has approximately 20% longer application time than other products, saving you time and energy.

#### **Instructions for use - Smooth surfaces**

1. Apply a generous layer of ES4 with a brush, brush evenly, and cover with plastic.
2. Wait for 12-48 hours to allow ES4 to work.
3. Rinse the surface with a coarse natural sponge to remove the residues.

#### **Dosage**

ES4 is used concentrated for effective paint stripping. Expect a consumption of approximately 0.3 liters per layer and square meter for efficient stripping. Five liters are usually sufficient for a 26-foot boat bottom.
